

NOVACLAU

Convenient and practical for marking keys with text or logo on request.

CHARACTERISTICS

It has two holes for anchoring it to a table with screws.

The recoil spring keeps the die in a raised position, leaving space to insert the key in the working area.

The working surface incorporates a groove that allows the insertion of bit keys.

The body of the marker is made from a single piece of solid steel to prevent breakage.

The engraving die is made of high-strength alloyed and hardened steel.

Optional one, two lines or logo.

The maximum length of the text is 16 mm and the size will depend on the number of characters that compose it.
